[Ph 1 Signs.pdf](#)

Hi Dave.

I'm having a tough time locating the specifics in writing, aside from the Specs which required a minimum size of 2' x 3'. However, based on previous correspondence regarding a Diamond Alkali sign that eventually replaced the removal action signs when we were completed, I found the following details, which I believe were what we used for the removal signs as well:

- 3' x 5' horizontal, aluminum will be extra heavy gauge same as traffic signs, rounded corners, and Grommets top, side, bottom and cable ties for hanging.

I'm also attaching a pdf of the what the signs looked like in case there are any questions about what was on the signs.

Any further questions please let me know.

Thanks,

Liz

Liz, do you know the answers to Tony's questions? The sign would be used at the Lyndhurst project.

David,

We're ready to start production of the site sign and I wanted to follow up with you to see if you had any detail on the type and sign of sign that Tierra used at Lister Avenue. We were thinking of having 2 aluminum signs made, horizontal and 3 ft X 2 ft. Do you know if the Tierra sign was larger and what material it was made of?
